

NIVARAN AI - EMERGENCY RESPONSE SYSTEM

Official Disaster Incident Report

Incident ID: 20260318-2320	
Timestamp:	2026-03-18 23:20:55
Location:	Mumbai - Central Station Feed
Disaster Type:	FLOOD
Severity:	HIGH
Confidence:	98.0%

OFFICIAL NDMA SAFETY PROTOCOLS

Based on the provided NDMA documents, the immediate safety steps for a flood are:

1. **Evacuation**: Warn people living in areas prone to flooding of any danger and evacuate them to safer areas.

2. **Identification of Vulnerable Spots**: Regularly inspect dams, flood embankments, levees, and other vulnerable spots during floods to identify areas that need immediate strengthening.

3. **Restoration/Strengthening Measures**: Ensure that restoration/strengthening measures of vulnerable spots are carried out before the commencement of monsoon every year.

4. **Provision of Safe Shelter**: Provide adequate number of raised platforms/flood shelters at suitable locations in the flood plains with basic amenities such as drinking water, sanitation, medical treatment, cooking, tents, and lanterns.

5. **Flood-Safe Public Utility Installations**: Make all public utility installations flood-safe.

6. **Safe Drinking Water**: Ensure safe and sufficient drinking water by protecting existing water sources from contamination, adding chlorine tablets, and providing latrine and proper waste disposal.

7. **Vector Control**: Spray shelters with residual insecticides and provide insecticide-treated mosquito nets.

8. **Medical Response**: Activate Quick Reaction Medical Teams (QRMTs), mobile field hospitals, Accident Relief Medical Vans (ARMVs), and heli-ambulances to provide prompt and efficient emergency medical response.

9. **Documentation of Medical Response**: Document the medical response provided after a flood for future improvement of response strategies.

These immediate safety steps will help minimize loss of lives and properties and provide immediate relief to the affected people.
